

The New 2017 Porsche 911 Carrera

Ultimate Performance Meets Tasteful Luxury

By Vincent Catena

Suncoast Porsche

The new 2017 Porsche 911 Carrera is taking performance and everyday usability to new heights. Innovative flat-six engines derived from four decades of turbocharging used in racing not only make this the fastest 911 Carrera ever, but also provide abundant torque for superior passing power. The completely new engine generation featuring twin-turbo technology provides a 20 hp increase compared to the previous models. The 3.0 liter engine in the standard Carrera now develops 370 hp. Using turbochargers with modified compressor wheels, a model-specific exhaust system, and a different tune for the engine management system, the 911 Carrera S delivers 420 hp from the same displacement.

Many exterior features of the 911 Carrera have been visually refined from new headlights with four-point daytime running lights to integrated door handle recesses, a redesigned rear deck lid with vertical louvers, and new rear lights – including the characteristic four-point brake lights. The new standard Porsche Communication Management system with a multi-touch display offers an expanded range of functions and simplified usability.

"Once again, everything is at stake. Setting a new standard. Creating a Sports Car like one never before seen. A Sports Car that has fascinated for generations. A vehicle that is our passion. The new 911."

The new 911 models also boast impressive performance: the 911 Carrera Coupé with Porsche-Doppelkupplung (PDK) and Sport Chrono Package sprints from zero to 60 miles per hour in 4.0 seconds – making it two tenths of a second faster than its predecessor. The 911 Carrera S with PDK and Sport Chrono Package needs just 3.7 seconds (also 0.2 s faster). Both models reach higher top track speeds: the 911 Carrera is now able to reach 183 miles per hour, while the 911 Carrera S can achieve up to 191 miles per hour.

When equipped with the optional Sport Chrono Package, the 911 Carrera now comes with a mode switch on the steering wheel, derived from the hybrid map switch in the 918 Spyder. The mode switch consists of a rotary dial with four positions for the driving modes Normal, Sport, Sport Plus, and Individual. Depending on the optional equipment installed in the car, the Individual setting allows drivers to configure their own specific vehicle set-up for the chassis, Auto Start/Stop system, PDK shifting strategy, and Sport Exhaust System. On models equipped

with the PDK transmission, the mode switch has a "Sport Response" button, which pre-conditions the drivetrain for maximum acceleration.

The uniqueness of the new 911 Carrera stems from its ability to blend refined everyday comfort with exceptional performance. The new Porsche 911 Carrera models are available now at Suncoast Porsche in Sarasota, 5005 S. Tamiami Trail, Sarasota, FL 34231, or call (941) 923-1700.
